

Healthy Feed Brings Profit

Sunar's Healthy Feed Formula

Sunar Yem products contain organic minerals (organic copper, organic manganese, organic zinc, organic selenium) and yeast!

Organic minerals ensure the effective utilization of energy and protein from feed in the rumen. This leads to higher productivity.

Sunar Feed provides technical support to Breeders.

Sunar Yem Technical Field Team, use particle separator!

This allows you to provide your ruminants with the ideal total mixed ration by ensuring roughage has the optimal particle size and mixing time. As a result, hoof problems are reduced, milk fat increases, and enhanced microbial activity in the rumen leads to higher milk yield.

Sunar Yem Technical Field Team perform manure analysis!

This allows the digestibility of the current diet to be evaluated. Based on the results, dietary recommendations are made to support rumen health and maximize feed digestibility.

Sunar Yem analyzes your roughage with its Roughage Analysis Center!

Your roughage is analyzed for protein, moisture, and energy content, allowing you to monitor the quality of your roughage. Sunar Yem Technical Field Team helps your business choose the most economical and beneficial roughage. Additionally, regular analysis of your total mixed rations allows you to compare the formulated ration with the actual one being implemented.

Sunar Yem Technical Field Team use advanced ration programs;

Based on the latest roughage analysis from the Roughage Analysis Center, the most suitable Sunar Yem feed and the most economical total mixed ration are recommended for your business.

Our Values

01 Employing Qualified Team

Raising healthy and productive animals requires expertise. In animal breeding, as Sunar Yem, our expert team provides technical support to farmers to ensure the correct and profitable feeding of animals.

02 Consistently Producing the Same Quality!

By utilizing by-products from the oil, starch, and flour factories within Sunar Yatırım, we achieve what is challenging in the industry—producing feed with consistent composition and quality for your animals throughout all 12 months of the year.

03 Prioritizing Health and Productivity Above All

By enriching our feed with organic minerals, toxin binders, and digestive regulators, we aim not only to support animal productivity but also to protect their health—maximizing the profitability of our farmers.

SUNAR

“Sağlıklı Yem Kazanç Sunar!”

Providing Value Since 1974

Sunar Investment, one of Turkey's rising stars in agriculture-based industry, exports to over 100 countries across six continents under its own brand. Backed by more than half a century of experience, a broad product portfolio, and a team of over 1,300 employees, Sunar Investment aims to become one of the world's leading agriculture-based industrial groups, leveraging its high production capacity, deep expertise, and extensive know-how.

Founded in 1974 by Senior Agricultural Engineer Hacı Nuri Çomu, Sunar Investment has today become a group of companies that includes businesses producing for the food, livestock, textile, paper, corrugated cardboard, chemical industry and construction sectors.

With bold and strategic investments, Sunar Investment offers a wide range of high value-added products. Its first industrial enterprise is Sunar Un ve Yem, which is also the first industrial establishment in Osmaniye. At Sunar Un ve Yem, varieties of bread flour and speciality whole wheat flours are produced. Located within the same complex, Sunar Yem manufactures cattle, sheep, and poultry feed in powder, granule, and pellet forms.

Another company under Sunar Investment is Sunar Mısır, which produces starch, modified starches, sorbitol-maltitol, glucose, and glucose-fructose syrups. At Elita Gıda, vegetable oils for retail and food service consumption are produced and marketed.

NÇS Tarım operates in the production and sale of fresh and dried fruits as well as chocolate. Sunar NP produces Türkiye's first certified biodegradable thermoplastic starch and biopolymer. All international commercial activities of the products produced by SUNAR are carried out by Sunar Pazarlama.

To conduct agricultural commodity trading and supply raw materials to global customers, Sunar Agro was established. Investments have also been initiated in Sunar Lidaş for licensed warehousing activities.

Sunar Yem is a subsidiary of Sunar Investment.

Corn Flake

mısır flake

It is a good energy source that provides maximum efficiency due to its high starch digestibility.

Benefits of Corn Flake

- » Increases feed consumption due to its taste and aroma.
- » Enhances meat and milk production.
- » The surface area is approximately 4 times larger, resulting in higher digestibility compared to ground corn.
- » Harmful microorganisms are eliminated at high temperatures.
- » It is a good energy source.

- » Corn Flake's using amount is relatively lower compared to whole and cracked corn, it provides savings.
- » Helps cows come into heat earlier.
- » Prevents body condition loss during early lactation
- » Supports the development of the rumen in calves during the early stages.
